Job Description  Senior Business Analyst

Page 2

• Interface with staff developing strategy as technical advisor for new functionality from Salesforce.com app exchange applications, releases, and upgrades
• Interface with vendor partners and design optimal solutions for integration with Salesforce.com
• Define and document internal and external user interfaces and support system and data requirement clarification and definition.
• Proactively communicate and collaborate with external and internal customers to analyze information needs and functional requirements and deliver the needed artifacts (i.e., functional requirements, business requirements document, use cases, GUI and screen and Interface designs).
• Drive and challenge business units on their assumptions of how they will successfully execute their plans.
• Proven Salesforce.com integration and administrative skills
• Familiarity with Salesforce.com Integration components for SFDC (for example, SFDC APIs, Apex controllers, Apex Web Services, Apex callout, outbound messaging, and SFDC data loaders)
• Proficient with technology, including office applications, sales force automation, database systems, executing data imports, running exports, merging records, and running reports
• Serve as the conduit between the customer community (internal and external customers) and the software development team through which requirements flow.
• Develop requirements specifications according to standard templates.
• Collaborate with developers and subject matter experts to establish the technical vision and analyze tradeoffs between usability and performance needs.
• Work directly with and serve as the liaison between business units, technology teams and support teams.
• Assist in quality assurance and defining testing strategy and risks. Provide significant contributions in the testing and debugging of new software or enhancements to existing software.
• Ensure issues are identified, tracked, reported on and resolved in a timely manner.
• Work with business unit personnel to identify required changes and communicate information to development team.
• Assist in the enforcement of project deadlines and schedules.
• Review and edit requirements, specifications, business processes and recommendations related to proposed solution.
• Develop functional specifications and system design specifications.
• Deliver informative, well-organized presentations.

EDUCATION AND/OR EXPERIENCE:
Typically requires a bachelor’s degree in Information Technology Management or related discipline or equivalent and 6 to 9 years of direct experience. Experience using enterprise-wide requirements definition and management systems and methodologies. Experience with Agile delivery methods is desired. Knowledge of all phases of software development including requirements analysis, design,
coding, testing (integration, user, and performance), debugging, implementation, and support. As the initial focus of this position will be in the area of Customer Relationship Management systems (CRM). A demonstrable track record of successful CRM design, planning and implementation of Salesforce is a critical requirement for this position.

SKILLS:
Must have a thorough understanding of how to interpret customer business needs and translate them into application and operational requirements. Ability to apply general organizational knowledge of the business and systems processes in problem analysis is required. Must have a solid understanding of application programming, database and system design. Ability to lead and negotiate business solutions that balance technical capability, cost, and time, against business need is required. Must exhibit confidence and an extensive knowledge of emerging industry practices when solving business problems. Ability to successfully engage in multiple initiatives simultaneously is required. Must possess strong leadership skills and generate enthusiasm among team members. Ability to work independently with users to define concepts, under direction of project managers is required. Must possess strong analytical, organizational and product management skills. Ability to communicate difficult sensitive information tactfully is required. Must possess excellent verbal and written communication skills. Ability to interact professionally with a diverse group, executives, managers, and subject matter experts is required. Must have an understanding of Internet, Intranet, Extranet and client/server architectures. Ability to push creative thinking beyond the boundaries of existing industry practices and client mindsets is required. Must have an understanding of how legacy and web-based systems interface with each other.

LANGUAGE SKILLS:
Ability to read, analyze, and interpret general business periodicals, professional journals, technical procedures, or governmental regulations. Ability to write and interpret reports, business correspondence, and/or procedure manuals. Ability to effectively present information and respond to questions from groups of managers, vendors, clients, customers, and the general public.

MATHEMATICAL SKILLS:
Ability to add, subtract, multiply, and divide in all units of measure, using whole numbers, common fractions, and decimals.

REASONING ABILITY:
Ability to apply common sense understanding to carry out detailed written or oral instructions. Ability to deal with problems, involving many variables, in different situations.

CERTIFICATES, LICENSES, REGISTRATIONS:
* Bachelors degree from an accredited 4-year university
* Salesforce.com Certified Administrator a +
* 2+ years experience - technical and/or process improvement project management.
* Salesforce.com integration experience between different business systems as well as working with integration tools
